Meeyoung Oh Min is a Research Associate Professor at the Jack, Joseph and Morton Mandel School of Applied Social Sciences, Case Western Reserve University. She received her Ph.D. in Social Welfare from Case Western Reserve University and MSW from Adelphi University, New York. Dr. Min’s research interests are in trauma, mental health, and substance abuse, primarily focusing on substance-using mothers and their children. She is particularly interested in how various biological (e.g. prenatal substance exposure), care-giving (e.g., maternal history of trauma and substance use), and environmental risk factors (e.g. neighborhood violence) that often cluster together in at-risk children of inner-city, low-socioeconomic status, interact as moderators or mediators to uniquely shape child development, including substance use and its related risk behaviors. Dr. Min is the principal investigator of a secondary data analyses study funded by the National Institute on Drug Abuse (R01DA042747). This study examines gender differences in behavioral trajectories leading to substance use and sexual risk behaviors in adolescents with and without prenatal cocaine/polydrug exposure, capitalizing on the combined datasets from two birth-cohort longitudinal data sets.
